# **Processing Technologies International, LLC ("PTI")**

CCC+

1 year PD 3.18% to 9.02%

- Strong balance sheet and stable customer base offer near-term credit protection. Despite their challenges they had a positive operating cf each year, projecting \$3.7mn Net Profit in FY-25.
- Steep decline in revenue, margins and misaligned capital allocation (e.g. distributions) question ownerships strategy (e.g. cash-out), and operational capabilities.

#### Strengths

- Conservative Leverage & Positive Cashflow: A Net Debt/EBITDA of just 0.16x and Debt-to-Assets of 6.9%, substantially below their peers (1.31x / 22.2%, respectively), provides significant financial flexibility and resilience. Despite their steep decline since FY-22, they still had a positive operting cf in FY-24 (\$1.7mn).
- High Customer Retention and Project Management Continuity: With a model focused on long-term capital equipment contracts and historical customer relationships spanning >20 years, PTI benefits from consistent demand across economic cycles.
- Diversity & Outlook: Serves packaging, construction, automotive, signage, and appliance markets across 20+ countries, buffering demand volatility in any one vertical. They project a growth in Revenue / Net Income by 21.5% / 367% in FY-25.

#### Challenges

- Rapid Profitability Deterioration: EBITDA margin dropped from 14.4% to 4.7% and ROCE fell from 25.8% to 4.8%, significantly trailing industry medians (9.5% and 13.4%).
- Distributions Amid Earnings Collapse: Although 79% below FY-22, they distributed \$1.1mn in FY-24, (133% of Net Income), despite a 73% drop in EBITDA, signaling poor capital prioritization during contraction, and questions commitment.
- Receivables Collapse and Revenue Contraction: Accounts receivable fell 81% YoY and revenue declined -33% since FY-22, possibly due to delayed orders, client loss, or shift in billing practices.

| Designs and manufactures plastic sheet extruders. |
| \$34.7M   |
|   |

- Company Overview: PTI is a privately held U.S.-based manufacturer of highperformance plastic sheet extrusion systems. Headquartered in Aurora, Illinois, the company designs, engineers, and services capital equipment solutions used in industrial-scale thermoplastic processing.
- Product: Offers a range of mono- and co-extrusion sheet systems, HVTSE® single-screw extruders, G-Series® and Multi-Nip™ roll stands, TITAN® process control systems, and ancillary sheet handling solutions such as winders and slitter
- Customers: Services industrial manufacturers across packaging, construction, automotive, appliance, lawn & garden, and signage sectors, with installations in more than 20 countries.
- Ownership: Privately owned following a 2011 management buyout by founders Dana Hanson and Jon Roberts; no PE or sponsor involvement since then.
- Debt Structure: Vast majority of Total Debt (\$1.4mn) is made of Operating Lease
  Liabilities. The entity has R/C-line over \$5mn, fully unused per end of FY-24, providing
  additional liquidity support, with a 2.5x max Debt/EBITDA covenant.
- Basis for Assessment: Complete and commented, audited financials per 2022, 2023, and 2024.
- Single Event Risks: Major customer loss could abruptly cut revenue, straining cash
  flow and fixed cost coverage (depending on rationale behind the drop in
  revenue/profitability since FY-22). Sustained margin pressure risks cash burn and
  default on lease or trade obligations. Key leadership exit (e.g. cash-out) without
  succession could disrupt operations and weaken client retention.

- Total revenue declined from \$51.8mn in FY-22 to \$34.7mn in FY-24, a 33% reduction, indicating either weakened demand or competitive erosion.
- While operating expenses remained largely stable over the period, EBITDA dropped from \$7.6mn to \$1.6mn, reflecting margin erosion rather than cost expansion.
- Operating cash flow remained positive all 3 years, despite the revenue challenges, and declining profitability.

### **Business Risk Highlights**

- Industry: Operates within the North American plastic extrusion machinery market, forecasted to grow at a 4.0% CAGR through 2030; however, the segment is cyclical and sensitive to industrial capex trends.
- Competitive Position: Faces strong U.S. competition from Davis-Standard, Graham Engineering (Welex), and Milacron, each offering similarly integrated extrusion systems with broader scale and tentatively better margin retention.
- Management: Despite declining profitability, the company continued to distribute dividends at unsustainable levels, raising questions about capital discipline and governance in owner-operated structures.
- PE Sponsor: PTi is a privately held, founder-led company that has operated under the same ownership since a 2011 management-led buyout (LBO), benefiting from stable, technically skilled leadership. However, continued shareholder distributions despite profit deterioration raise concerns over financial discipline and long-term creditor protection.
